
Docker container
Config YAML
+ one seed
Data
private, mounted
read-only
Repo state
git SHA, uv.lock
Pinned CUDA image
uv sync --frozen
Deterministic setup
seeds, deterministic
kernels, fixed threads
Training job
forecasters on GPU,
RL on CPU by default
only visible device
Host GPU GPU_ID
seen as cuda:0 inside
Run directory
runs/<name>-<sha8>-s<seed>/
config.yaml
manifest.json
metrics.json
model/
forecasts.parquet
checkpoints/
manifest.json records
git SHA (+ dirty flag), sha256 of
inputs, package versions, CUDA /
driver / GPU, resolved config
promote
artifacts/
served models
Simulator,
API, frontend
runs never over-
write artifacts/
until promoted
